

DL Processing

DL processing requires some work pre-uploading of files. This is because your standard DL brochures are produced in a panel format. There are generally 3 panels per page.

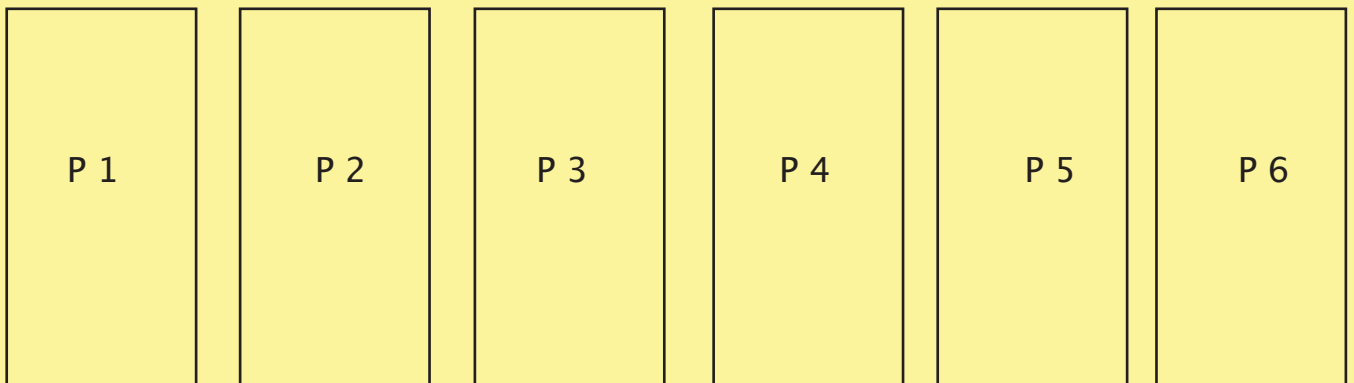

Page 1: 3 panels

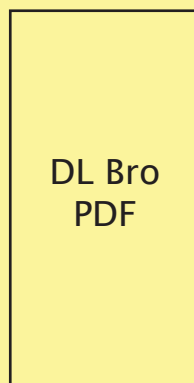

Page 2: 3 panels

A DL brochure needs to be processed so that each panel is represented on its own page.

6 individual pages

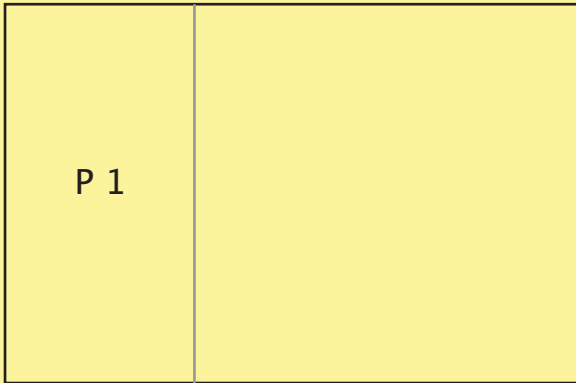

You then upload a PDF containing the pages in order from beginning to end.

1 PDF with 6 pages

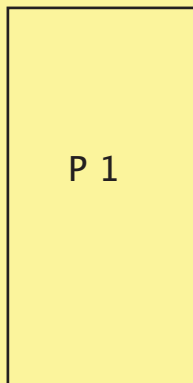

Trouble Shoot

An issue that can arise with pre-processing of the DL brochure is when the panels are not broken up into individually sized pages. This means that the panel has been broken up, however the page dimensions are still the size of the original brochure.

Page 1: 1 panel same dimensions of original page

Pages need to be the dimensions of the actual panels not the dimensions of the original page.
